

a Tomato Seedling!

tips:

1. Hard off the seedling by leaving it outside on your porch for a few days prior to planting. This gets it used to the temperature prior to exposing it fully to the elements.

2. Plant the seedling in your garden or plant pot – plant it deeply enough such that the stem is buried.

3. Water the seedling right away after transplanting.

4. Watch the plant grow and be prepared for some delicious, freshly-picked tomatoes later this summer!

Eating some of your own food is a great way to Take A Bite Out of Climate Change. Food that is grown in your own backyard is the most climate-friendly food. It's a 0-mile diet on this one... we're talking 100-yard diet!
